Penerbitan Perangkaan Penting, Malaysia, 2023 membentangkan statistik kelahiran dan kematian bagi tahun 2022 di peringkat nasional, negeri dan daerah pentadbiran. Indikator demografi seperti kadar kelahiran, kadar kematian dan kadar kesuburan turut dimuatkan dalam penerbitan ini. Jadual perangkaan penting terpilih mengikut jantina, kumpulan umur dan etnik juga disediakan. Statistik ini telah disusun berdasarkan konsep dan garis panduan *Principles and Recommendations for a Vital Statistics System, Revision 3* yang diterbitkan oleh *United Nations Statistics Division (2014)*.

Perangkaan penting merupakan input utama yang digunakan dalam pembentukan, pelaksanaan dan pemantauan dasar di peringkat nasional dan antarabangsa. Maklumat berkaitan kesuburan dan mortaliti adalah berguna bagi perancangan dasar dalam bidang kesihatan, pendidikan, ekonomi dan sosial di Malaysia.

Bahagian pertama penerbitan ini membentangkan ringkasan penemuan. Bahagian kedua pula memuatkan statistik peringkat nasional, negeri dan daerah pentadbiran bagi membolehkan analisis terperinci dilaksanakan. Ini diikuti oleh nota teknikal yang menerangkan konsep dan definisi bagi membantu pengguna memahami statistik yang diterbitkan.

Jabatan merakamkan setinggi-tinggi penghargaan di atas kerjasama Jabatan Pendaftaran Negara (JPN) dan Kementerian Kesihatan Malaysia (KKM) dalam membekalkan data kelahiran dan kematian. Setiap maklum balas dan cadangan daripada semua pihak untuk penambahbaikan penerbitan ini pada masa akan datang amat dihargai.

The publication of *Vital Statistics, Malaysia, 2023* presents statistics on births and deaths at national, state and administrative district for 2022. The demographic indicators, such as birth, death and fertility rates are also included in this publication. Selected vital statistics tables by sex, age and ethnic group are also presented. The statistics have been compiled based on the concepts and guidelines of *Principles and Recommendations for a Vital Statistics System, Revision 3* published by the United Nations Statistics Division (2014).

Vital statistics is the main input used for formulation, implementation and monitoring of policies at national and international levels. Information on fertility and mortality is useful for policy planning in the areas of health, education, economy and social in Malaysia.

The first part of this publication focused on the summary of findings. The second part presented statistics for national, state and administrative district to facilitate in-depth analysis. This is followed by technical notes that explains the concepts and definitions to assist users to understand the published statistics.

The Department gratefully acknowledges the co-operation of the National Registration Department (NRD) and the Ministry of Health (MoH) for providing birth and death data. Every feedback and suggestion from all parties towards improving future publications is highly appreciated.

3. KESUBURAN

Kadar kesuburan jumlah (TFR) menurun sejak lima dekad yang lalu

TFR merupakan indikator demografi yang digunakan untuk menganggarkan purata bilangan anak yang perlu dilahirkan oleh seorang perempuan selama tempoh reproduktifnya (15-49 tahun). Selama lima dekad yang lalu, TFR bagi perempuan berumur 15-49 tahun merekodkan penurunan daripada 4.9 anak pada 1970 kepada 1.6 anak pada 2022.

Sejak 1970 hingga 2012, TFR negara telah direkodkan di atas paras penggantian¹ iaitu 2.1 anak yang menunjukkan bahawa purata bilangan anak yang dilahirkan oleh seorang perempuan sepanjang tempoh kesuburannya mencukupi untuk menggantikan dirinya dan pasangannya. Walau bagaimanapun, TFR mula menurun di bawah paras penggantian bermula tahun 2013 hingga kini.

Carta 7: Kadar kesuburan jumlah, Malaysia, 1970-2022

Penurunan TFR bagi semua kumpulan etnik utama

TFR bagi semua kumpulan etnik utama di Malaysia kekal tidak berubah kecuali Melayu pada 2022 berbanding 2021. TFR bagi semua etnik kecuali Melayu berada di bawah paras penggantian.

TFR tertinggi dicatatkan oleh Melayu iaitu 2.1 anak pada 2022. Manakala, Cina merekodkan TFR terendah iaitu 0.8 anak bagi setiap perempuan berumur 15-49 tahun. (Carta 8)

¹ Berdasarkan kepada *United Nations (UN)*, paras penggantian kesuburan adalah pada 2.1 anak bagi setiap perempuan. Nilai ini mewakili purata bilangan anak yang perlu dilahirkan oleh seorang perempuan dengan menanggung seorang anak perempuan yang hidup sehingga anak tersebut melahirkan anak. Jika paras penggantian kesuburan kekal dalam tempoh yang panjang, setiap generasi secara tepat akan menggantikan dirinya tanpa mengambil kira migrasi penduduk (*Principle and Recommendation for a Vital Statistics, Revision 3*).

6. INDIKATOR SDG YANG BERKAITAN PERANGKAAAN PENTING

Agenda 2030 untuk Matlamat Pembangunan Mampan (SDG) mempunyai tiga dimensi iaitu sosial, ekonomi dan alam sekitar. Agenda ini telah dipersetujui oleh pemimpin dunia pada September 2015 semasa sesi ke-70 Perhimpunan Agung Bangsa-Bangsa Bersatu.

SDG mengandungi 17 Matlamat dan 169 Sasaran. Indikator SDG yang berkaitan dengan Perangkaan Penting berada di bawah Matlamat 3: Memastikan kehidupan yang sihat dan menggalakkan kesejahteraan untuk semua peringkat umur. Indikatornya ialah 3.1.1, 3.2.1, 3.2.2 dan 3.7.2.

Indikator 3.1.1: Nisbah mortaliti ibu bersalin (MMR)

MMR mengukur prestasi bagi Sasaran 3.1: Menjelang 2030, mengurangkan nisbah mortaliti ibu bersalin di peringkat global kepada kurang daripada 70 bagi setiap 100,000 kelahiran hidup.

Secara keseluruhannya, Malaysia telah mencapai Sasaran 3.1 sejak 1979. MMR menurun daripada 68.2 (2021) kepada 26.0 bagi setiap 100,000 kelahiran hidup pada 2022. (Carta 17)

Carta 17: Kematian ibu bersalin (bilangan dan nisbah), Malaysia, 2011-2022

Indikator 3.2.1 & 3.2.2: Kadar mortaliti umur kurang 5 tahun (U5MR) dan kadar mortaliti neonatal (NMR)

U5MR dan NMR merupakan indikator untuk mengukur prestasi bagi Sasaran 3.2: Menjelang 2030, menamatkan kematian yang boleh dicegah bagi bayi baru lahir dan kanak-kanak kurang daripada umur 5 tahun, dengan semua negara menyasarkan untuk mengurangkan mortaliti neonatal kepada sekurang-kurangnya 12 bagi setiap 1,000 kelahiran hidup dan mortaliti di bawah umur 5 tahun kepada sekurang-kurangnya 25 bagi setiap 1,000 kelahiran hidup.

Malaysia telah mencapai Sasaran 3.2 untuk U5MR dan NMR sejak 1984 dengan kadar terkini bagi U5MR adalah 8.6 dan NMR adalah 4.2 bagi setiap seribu kelahiran hidup pada 2022.

Indikator 3.7.2: Kadar kelahiran remaja (umur 10–14 tahun dan umur 15–19 tahun) bagi setiap seribu perempuan di dalam kumpulan umur tersebut

Kadar kelahiran remaja merupakan indikator untuk mengukur prestasi bagi Sasaran 3.7: Menjelang 2030, memastikan akses sejagat kepada perkhidmatan penjagaan kesihatan seksual dan reproduktif, termasuk perancang keluarga, maklumat dan pendidikan, dan penyepaduan kesihatan reproduktif ke dalam strategi dan program kebangsaan.

Kadar kelahiran remaja berumur 10–14 tahun berada pada kadar antara 0.1 dan 0.2 bagi setiap seribu perempuan berumur 10–14 tahun bagi tempoh 2011 hingga 2022. Sementara itu, kadar kelahiran remaja bagi umur 15–19 tahun menunjukkan trend yang menurun daripada tahun 2012 dengan 14.3 bayi bagi setiap seribu perempuan berumur 15–19 tahun kepada 5.8 pada 2022.

Sumber data: World Development Indicator (WDI), dikemaskini September 2023 (Data 2021) kecuali Malaysia (Data 2022)

Untuk lima dekad yang lalu, TFR telah menurun di semua negara terpilih dengan penurunan kadar yang berbeza mengikut tahap kesuburan mereka. Terdapat beberapa negara yang menghadapi penurunan TFR di bawah paras penggantian jauh lebih awal dan negara-negara tersebut ialah *Japan* (1975: 1.9 anak), *Australia* (1977: 2.0 anak) dan *Singapore* (1977: 1.8 anak).

China mempunyai TFR yang tinggi berbanding negara terpilih yang lain pada 1970. TFR China menurun daripada 6.0 anak pada tahun 1970 kepada bawah paras penggantian pada 1991 disebabkan dasar satu anak yang dilaksanakan pada akhir 1970-an. Oleh itu, China telah mencuba pelbagai langkah untuk meningkatkan kadar kelahiran dan pertumbuhan Penduduk melalui pemansuhan dasar satu anak pada 2016 dan mula membenarkan pasangan mempunyai sehingga tiga anak pada 2021 (Huiling Tan, 2023).

1. INTRODUCTION

The publication of *Vital Statistics, Malaysia, 2023* presents the birth and death statistics by demographic characteristics, states and administrative districts in 2022. Vital statistics comprise vital events in a life time of a person that serve as the main input for the formulation of policies and the planning of programme in health, education, employment and others.

The statistics reported in this publication refer to births and deaths data registered at the National Registration Department. The demographic indicators that involved population data for 2020 to 2022 have been revised based on the Population and Housing Census of Malaysia 2020 (MyCensus 2020). Meanwhile, the indicators for 2011 to 2019 are based on the Population and Housing Census of Malaysia 2010 and will be revised later.

2. LIVE BIRTHS

Live births refer to births with signs of life during delivery although for a very short period and crude birth rate (CBR) is the number of live births per thousand population.

Live births in 2022 continue to decline

The number of live births was 423,124 in 2022, a decrease of 3.8 per cent (16,620 births) as compared to 439,744 in 2021. The CBR declined from 13.5 (2021) to 12.9 (2022) births per thousand population.

Chart 1: Live births and crude birth rate, Malaysia, 2011-2022

More males newborn than females, CBR for both sexes declined

The number of male babies in 2022 was 218,345 which is 51.6 per cent of the 423,124 total live births. Meanwhile, the birth of female babies was 204,779 (48.4%). The CBR for both sexes declined from 13.3 (male) and 13.7 (female) in 2021 to 12.8 (male) and 13.1 (female) births per thousand population in 2022. The CBR has been in a declining trend since 2015.

Chart 2: Live births and crude birth rate by sex, Malaysia, 2011-2022

CBR of Citizens and Non-citizens decreased

The CBR of Citizens for both males and females decreased from 14.4 births and 13.9 births in 2021 to 13.7 births and 13.2 births per thousand Citizens population in 2022, respectively (Chart 3). Meanwhile, the CBR of Non-citizens for both males and females recorded an increase from 4.5 births and 9.4 births in 2021 to 4.7 births and 10.0 births per thousand Non-citizens population in 2022, respectively (Chart 4).

3. FERTILITY

Total fertility rate (TFR) continue to decline over five decades

The TFR is a standard demographic indicator used to estimate the average number of children that a woman would have over her childbearing age (15-49 years). Over the last five decades, fertility measured by TFR has declined significantly from 4.9 children per woman of childbearing age in 1970 to 1.6 children in 2022.

Since 1970 up to 2012, the national TFR was still above the replacement level¹ of 2.1 children which indicates that the average number of children born per woman throughout her reproductive life has been sufficient to replace herself and her partner. However, the TFR started to decline below the replacement level from 2013 onwards.

Chart 7: Total fertility rate, Malaysia, 1970-2022

Decrease in TFR for all major ethnic groups

TFR for all major ethnic groups in Malaysia remained unchanged except for Malay in 2022 as compared to 2021. TFR for all ethnic except Malay was below replacement level.

The highest TFR was recorded by Malay which is 2.1 children in 2022. Meanwhile, Chinese recorded the lowest TFR of 0.8 children per woman aged 15-49 years. (Chart 8)

¹ Based on the United Nations (UN), the replacement level fertility is the total fertility levels of about 2.1 children per woman. This value represents the average number of children a woman would need to have to reproduce herself by bearing a daughter who survives to childbearing age. If replacement level fertility is sustained over a sufficiently long period, each generation will exactly replace itself in absence of migration (Principle and Recommendation for a Vital Statistics, Revision 3).

Chart 8: Total fertility rate by major ethnic group, Malaysia, 2011-2022**Pulau Pinang and W.P. Kuala Lumpur recorded the lowest TFR**

Ten states recorded a decrease in TFR for 2022 as compared to 2021. Meanwhile, Melaka, Pulau Pinang, Sabah, Sarawak, Selangor and W.P. Kuala Lumpur remained unchanged. Pulau Pinang and W.P. Kuala Lumpur recorded the lowest TFR of 1.2 children while Terengganu recorded the highest with 2.9 children per woman aged 15-49 years.

The number of stillbirths in 2022 was 2,134, a decreased of 4.0 per cent as compared to 2,219 in 2021. The stillbirth rate (SBR) remained at 5.0 per thousand births.

Chart 16: Stillbirths and stillbirth rate, Malaysia, 2011-2022

Perlis recorded the lowest SBR

SBR for seven states showed a decline in 2022 as compared to 2021 namely Johor, Melaka, Kelantan, Sabah, Perak, W.P. Kuala Lumpur and W.P. Putrajaya. Sabah recorded the highest SBR of 6.7 per thousand births while Perlis recorded the lowest rate of 3.7 in 2022. (Exhibit 4)

6. SDG INDICATORS RELATED TO VITAL STATISTICS

The 2030 Agenda for Sustainable Development Goals (SDG) has three dimensions namely social, economy and environment. This Agenda was agreed by the world leaders in September 2015 at the 70th Session of the United Nations General Assembly.

SDG consist of 17 Goals and 169 Targets. SDG indicators related to Vital Statistics are monitored in Goal 3: Ensure healthy lives and promote well-being for all at all ages. The indicators are 3.1.1, 3.2.1, 3.2.2 and 3.7.2.

Indicator 3.1.1: Maternal mortality ratio (MMR)

MMR measures the performance of Target 3.1: By 2030, reduce the global maternal mortality ratio to less than 70 per 100,000 live births.

Overall, Malaysia has achieved the Target 3.1 since 1979. MMR decreased from 68.2 (2021) to 26.0 per 100,000 live births in 2022. (Chart 17)

Chart 17: Maternal deaths (number and ratio), Malaysia, 2011-2022

Indicator 3.2.1 & 3.2.2: Under-five mortality rate (U5MR) and neonatal mortality rate (NMR)

U5MR and NMR are the indicators to measure the performance of Target 3.2: By 2030, end preventable deaths of newborns and children under 5 years of age, with all countries aiming to reduce neonatal mortality to at least as low as 12 per thousand live births and under-5 mortality to at least as low as 25 per thousand live births.

Malaysia has achieved the Target 3.2 for U5MR and NMR since 1984 with the latest U5MR at 8.6 and NMR at 4.2 per thousand live births in 2022.

Chart 18: Under-Five Mortality Rate (U5MR) and Neonatal Mortality Rate (NMR), Malaysia, 2011-2022

Indicator 3.7.2: Adolescent birth rate (aged 10–14 years; aged 15–19 years) per thousand women in that age group

Adolescent birth rate is an indicator to measure the performance of Target 3.7: By 2030, ensure universal access to sexual and reproductive health-care services, including for family planning, information and education and the integration of reproductive health into national strategies and programmes.

The adolescent birth rate for aged 10–14 years is between 0.1 and 0.2 per thousand women aged 10–14 years for the period 2011 to 2022. Meanwhile, the adolescent birth rate for aged 15–19 years showed a declining trend from 14.3 per thousand women aged 15–19 years in 2012 to 5.8 in 2022.

7. CBR, CDR AND TFR FOR SELECTED COUNTRIES

Five countries among the ASEAN countries which are Lao PDR (2.7), Cambodia (2.5), Philippines (2.7), Indonesia (2.3) and Myanmar (2.2) recorded TFR above the replacement level in 2021. This was in line with the high CBR recorded for the countries. Meanwhile, all the selected developed countries recorded TFR below the replacement level in 2021.

Chart 22 and Table 4 show the comparisons between CBR and TFR by selected countries for 1970 and 2021. Republic of Korea recorded the highest decline in CBR with 26.1 points in 2021 as compared to 1970. Meanwhile, China recorded the highest decline with 4.9 points for TFR in 2021 as compared to 1970.

Data source: World Development Indicator (WDI), updated September 2023 (Data 2021) except for Malaysia (Data 2022)

For the past five decades, TFR has been declining in all selected countries with the varying declining pace according to their level of fertility. There are few countries that have been faced decline in the level of TFR below replacement level much earlier and the countries are Japan (1975: 1.9 children), Australia (1977: 2.0 children) and Singapore (1977: 1.8 children).

China had a relatively high TFR among other selected countries in 1970. However, China's TFR fallen from 6.0 children in 1970 to below replacement level at 1.9 children in 1991 due to one-child policy that was implemented in the late 1970s. However, China has urgently trying an array of measures to increase birth rate and population growth through abolishing one-child policy in 2016 and began allowing couples to have up to three children in 2021 (Huileng Tan, 2023).

1. Indikator demografi

Semua indikator demografi yang melibatkan data penduduk tahun 2020 hingga 2022 telah disemak semula berdasarkan data Banci Penduduk dan Perumahan Malaysia (Banci Malaysia 2020). Manakala, indikator bagi tahun 2011-2019 berdasarkan data Banci Penduduk dan Perumahan Malaysia 2010 dan akan disemak semula.

2. Liputan

Rekod kelahiran hidup, kelahiran mati dan kematian yang diperoleh dari JPN adalah meliputi seluruh Malaysia. Analisis perangkaan penting dilaksanakan berdasarkan maklumat yang dilaporkan oleh pemaklum semasa pendaftaran kelahiran di Borang Daftar Kelahiran (JPN.LM01) dan pendaftaran kematian di Borang Daftar Kematian (JPN.LM02). Borang JPN.LM01 dan JPN.LM02 adalah seperti di **Lampiran**.

Bilangan kematian perinatal meliputi kelahiran mati dan kematian bayi yang berumur kurang daripada tujuh hari.

Bilangan kematian ibu bersalin adalah meliputi kematian yang disebabkan gangguan mental.

Data kematian di Sabah telah disesuaikan dengan angka kurang liputan pendaftaran yang diperoleh daripada hasil Kajian Kurang Liputan Pendaftaran Kematian di Sabah¹ yang telah dijalankan oleh Jabatan Perangkaan Malaysia.

Jantina	Kawasan	Liputan (%)
Lelaki	Malaysia	100
	Semenanjung Malaysia	100

3. Tempat kediaman

Analisis kelahiran dan kematian yang dibentangkan dalam penerbitan ini adalah berdasarkan tempat kediaman biasa ibu atau simati.

¹ Hasil kajian telah diluluskan oleh Jawatankuasa Induk Pelaksanaan Civil Registration and Vital Statistics pada tahun 2016.

4. Tempat kejadian

Analisis kelahiran dan kematian berdasarkan tempat kejadian juga dibentangkan dalam penerbitan ini. Tempat kejadian adalah lokasi geografi di sebuah negara yang mana kejadian kelahiran dan kematian berlaku seperti di fasiliti kesihatan awam atau swasta.

5. Kumpulan etnik

Klasifikasi kumpulan etnik adalah berasaskan klasifikasi yang telah digunakan semasa Banci Penduduk dan Perumahan Malaysia 2020. Pengelasan adalah seperti berikut:

- a) Bumiputera terdiri daripada Melayu dan Bumiputera lain;
- b) Cina;
- c) India; dan
- d) Lain-lain termasuk Bukan Warganegara.

6. Konsep

(i) Pertambahan semula jadi

Merujuk kepada perbezaan di antara kelahiran dan kematian.

(ii) Kelahiran hidup

Merujuk kepada kelahiran yang bernyawa semasa dilahirkan walaupun hanya seketika.

(iii) Kelahiran mati

Merujuk kepada kelahiran selepas kehamilan 28 minggu atau lebih yang tiada tanda bernyawa semasa dilahirkan.

(iv) Kematian perinatal

Merujuk kepada kelahiran mati dan kematian bayi yang berumur kurang daripada satu minggu.

(v) Kematian neonatal awal

Merujuk kepada kematian bayi yang berumur kurang daripada satu minggu.

(vi) Kematian neonatal akhir

Merujuk kepada kematian bayi yang berumur 7 hingga kurang daripada 28 hari.

(vii) Kematian neonatal

Merujuk kepada kematian bayi yang berumur kurang daripada 28 hari.

(viii) Kematian bayi

Merujuk kepada kematian bayi yang berumur kurang daripada satu tahun.

(ix) Kematian kanak-kanak

Merujuk kepada kematian kanak-kanak yang berumur 1-4 tahun.

(x) Kematian kurang daripada 5 tahun

Merujuk kepada kematian bayi dan kanak-kanak yang berumur kurang daripada 5 tahun.

(xi) Kematian ibu bersalin

Merujuk kepada kematian seorang wanita ketika mengandung, melahirkan anak atau 42 hari dalam tempoh selepas melahirkan anak atau keguguran akibat daripada proses kehamilan dan pengendaliannya atau penyakit-penyakit yang menjejaskan kesihatan ibu dan bukan daripada penyebab kemalangan atau kebetulan.

(xii) Kadar kesuburan umur tertentu

Merujuk kepada bilangan kelahiran oleh ibu bagi kumpulan umur tertentu dalam sesuatu tahun, bagi setiap 1,000 perempuan dalam kumpulan umur berkenaan.

(xiii) Kadar kesuburan jumlah

Merujuk kepada purata bilangan anak yang akan dilahirkan sekiranya seseorang perempuan terus hidup sehingga akhir tempoh reproduktifnya dan di sepanjang tempoh itu tertakluk kepada kadar kesuburan umur tertentu bagi sesuatu tahun. [Kadar ini diperolehi dengan menjumlahkan kadar kesuburan umur tertentu perempuan yang berumur 15-49 tahun (mengikut kumpulan umur lima tahun) dan didarabkan dengan 5].

(xiv) Paras penggantian kesuburan

Paras penggantian kesuburan adalah pada 2.1 anak bagi setiap wanita pada umur reproduktif (15-49 tahun). Nilai ini mewakili purata bilangan anak yang perlu dilahirkan oleh seorang wanita dengan menanggung seorang anak perempuan yang hidup sehingga anak tersebut melahirkan anak. Jika paras penggantian kesuburan kekal dalam tempoh yang panjang, setiap generasi secara tepat akan menggantikan dirinya tanpa mengambil kira migrasi penduduk.

(xv) Purata umur ibu pada kelahiran hidup pertama

Merujuk kepada purata umur ibu yang melahirkan anak pertama.

(xvi) Kadar reproduksi kasar

TECHNICAL NOTES

1. Demographic indicator

The demographic indicators that involved population data for 2020 to 2022 have been revised based on Population and Housing Census of Malaysia 2020 (MyCensus 2020). Meanwhile, the indicators for 2011-2019 are based on Population and Housing Census of Malaysia 2010 and will be revised later.

2. Coverage

The records on live births, stillbirths and deaths received from the NRD cover the whole Malaysia. Analysis of vital statistics are based on information which is reported by informants during the births registration in The Register of Birth Form (JPN.LM01) and deaths registration in The Register of Death Form (JPN.LM02). JPN.LM01 and JPN.LM02 form are as **Appendix**.

The number of perinatal deaths covers stillbirths and infant deaths aged less than one week.

The number of maternal deaths includes deaths caused by mental disorders.

The number of deaths in Sabah has been adjusted due to under reporting of death registration obtained from the Study of Under Reporting of Death Registration in Sabah¹ which was conducted by the Department of Statistics, Malaysia.

Sex	Region	Coverage (%)
Male	Malaysia	100
	Peninsular Malaysia	100
	Sabah	78
	Sarawak	100
	Malaysia	100
Female	Peninsular Malaysia	100
	Sabah	83
	Sarawak	100

3. Place of residence

Analysis of births and deaths presented in this publication are based on place of usual residence of mother or the deceased.

4. Place of occurrence

Analysis of births and deaths based on place of occurrence also presented in this publication. Place of occurrence is the geographical location in the country where the births and deaths occurred such as in public or private health facility.

¹ The results of the study have been approved by the Steering Committee on Implementation of Civil Registration and Vital Statistics in 2016.

5. Ethnic groups

The classification on ethnic groups is based on the classification used in the Population and Housing Census of Malaysia 2020. The classification is as follows:

- a) Bumiputera consists of Malay and Other Bumiputera;
- b) Chinese;
- c) Indians; and
- d) Others include Non-Citizens.

6. Concepts

(i) **Natural Increase**

Refers to the excess of births over deaths.

(ii) **Live births**

Refers to births with signs of life during delivery although for a very short period.

(iii) **Stillbirths**

Refers to births after 28 completed weeks or more of gestation without any sign of life during delivery.

(iv) **Perinatal deaths**

Refers to stillbirths and deaths of infants aged less than one week.

(v) **Early neonatal deaths**

Refer to death of infants aged less than one week.

(vi) **Late neonatal deaths**

Refer to death of infants aged 7 to less than 28 days.

(vii) **Neonatal deaths**

Refers to deaths of infants aged less than 28 days.

(viii) **Infant deaths**

Refers to deaths of infants aged less than one year.

(ix) **Toddler deaths**

Refers to deaths of toddlers aged 1-4 years.

(x) **Under-5 mortality**

Refers to deaths of infants and toddlers aged below 5 years.

(xi) Maternal deaths

Refers to deaths of a woman while pregnant, childbirth or within 42 days after the termination of pregnancy, irrespective of the duration and site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management but not from accidental causes.

(xii) Age-specific fertility rate

Refers to the number of births by mothers within a specific age group during a given year, per 1,000 females in that age group.

(xiii) Total fertility rate

Refers to the average number of children which would be born if women survived to the end of their reproductive period and throughout that period are subject to the schedule of age-specific fertility rates for the given year [This rate is derived by adding up the age-specific fertility rates of women aged 15-49 years (by five-year age groups) and multiplying by 5].

(xiv) The replacement level fertility

The replacement-level fertility is the total fertility levels of about 2.1 children per woman in reproductive age (15-49 years). This value represents the average number of children a woman would need to have to reproduce herself by bearing a daughter who survives to childbearing age. If replacement level fertility is sustained over a sufficiently long period, each generation will exactly replace itself in absence of migration.

(xv) Mean age at first live birth

Refers to the average age of mothers who deliver their first child.

(xvi) Gross reproductive rate

Refers to the average number of daughters that would be born if women survived to the end of their reproductive period, assuming that none died or migrated.

(xvii) Net reproductive rate

Refers to the average number of daughters that would be born if women survived to the end of their reproductive period, taking into account the average female survivors.

(xviii) Age-specific death rate

Refers to the average number of deaths for every 1,000 population within a specific age group.
